

# ESGF Errata Service for CMIP6

Guillaume Levavasseur<sup>1</sup>

Atef Bennasser<sup>1</sup>

Mark Greenslade<sup>1</sup>

Sébastien Denvil<sup>1</sup>

December 6<sup>th</sup>, 2016

## Plan:

- Overview and contributors
- Progress and accomplishments
- Incoming roadmap and developments
- Short demo

# The Errata Service in a nutshell

branded by  **es-doc** Earth System Documentation and in collaboration with  **DKRZ**

<http://test.errata.es-doc.org>

## From a proof-of-concept to an ESGF service

### CONSTRAINTS

### $\alpha$ -PHASE DELIVERABLES

Issue registration is manually triggered and cannot be made mandatory.

- ✓ Ability to create and close an issue through an efficient and simple workflow
- ✓ Centralized issue management
- ✓ Lightweight client available through PyPI
- ✓ Updated documentation

The risk of user mistakes must be anticipated.

- ✓ Ability to update and retrieve an issue
- ✓ Structured issue template ensures service quality and security
- ✓ Unchanged or value-controlled attributes

An issue provides a sensitive message about climate model quality that must not be misused.

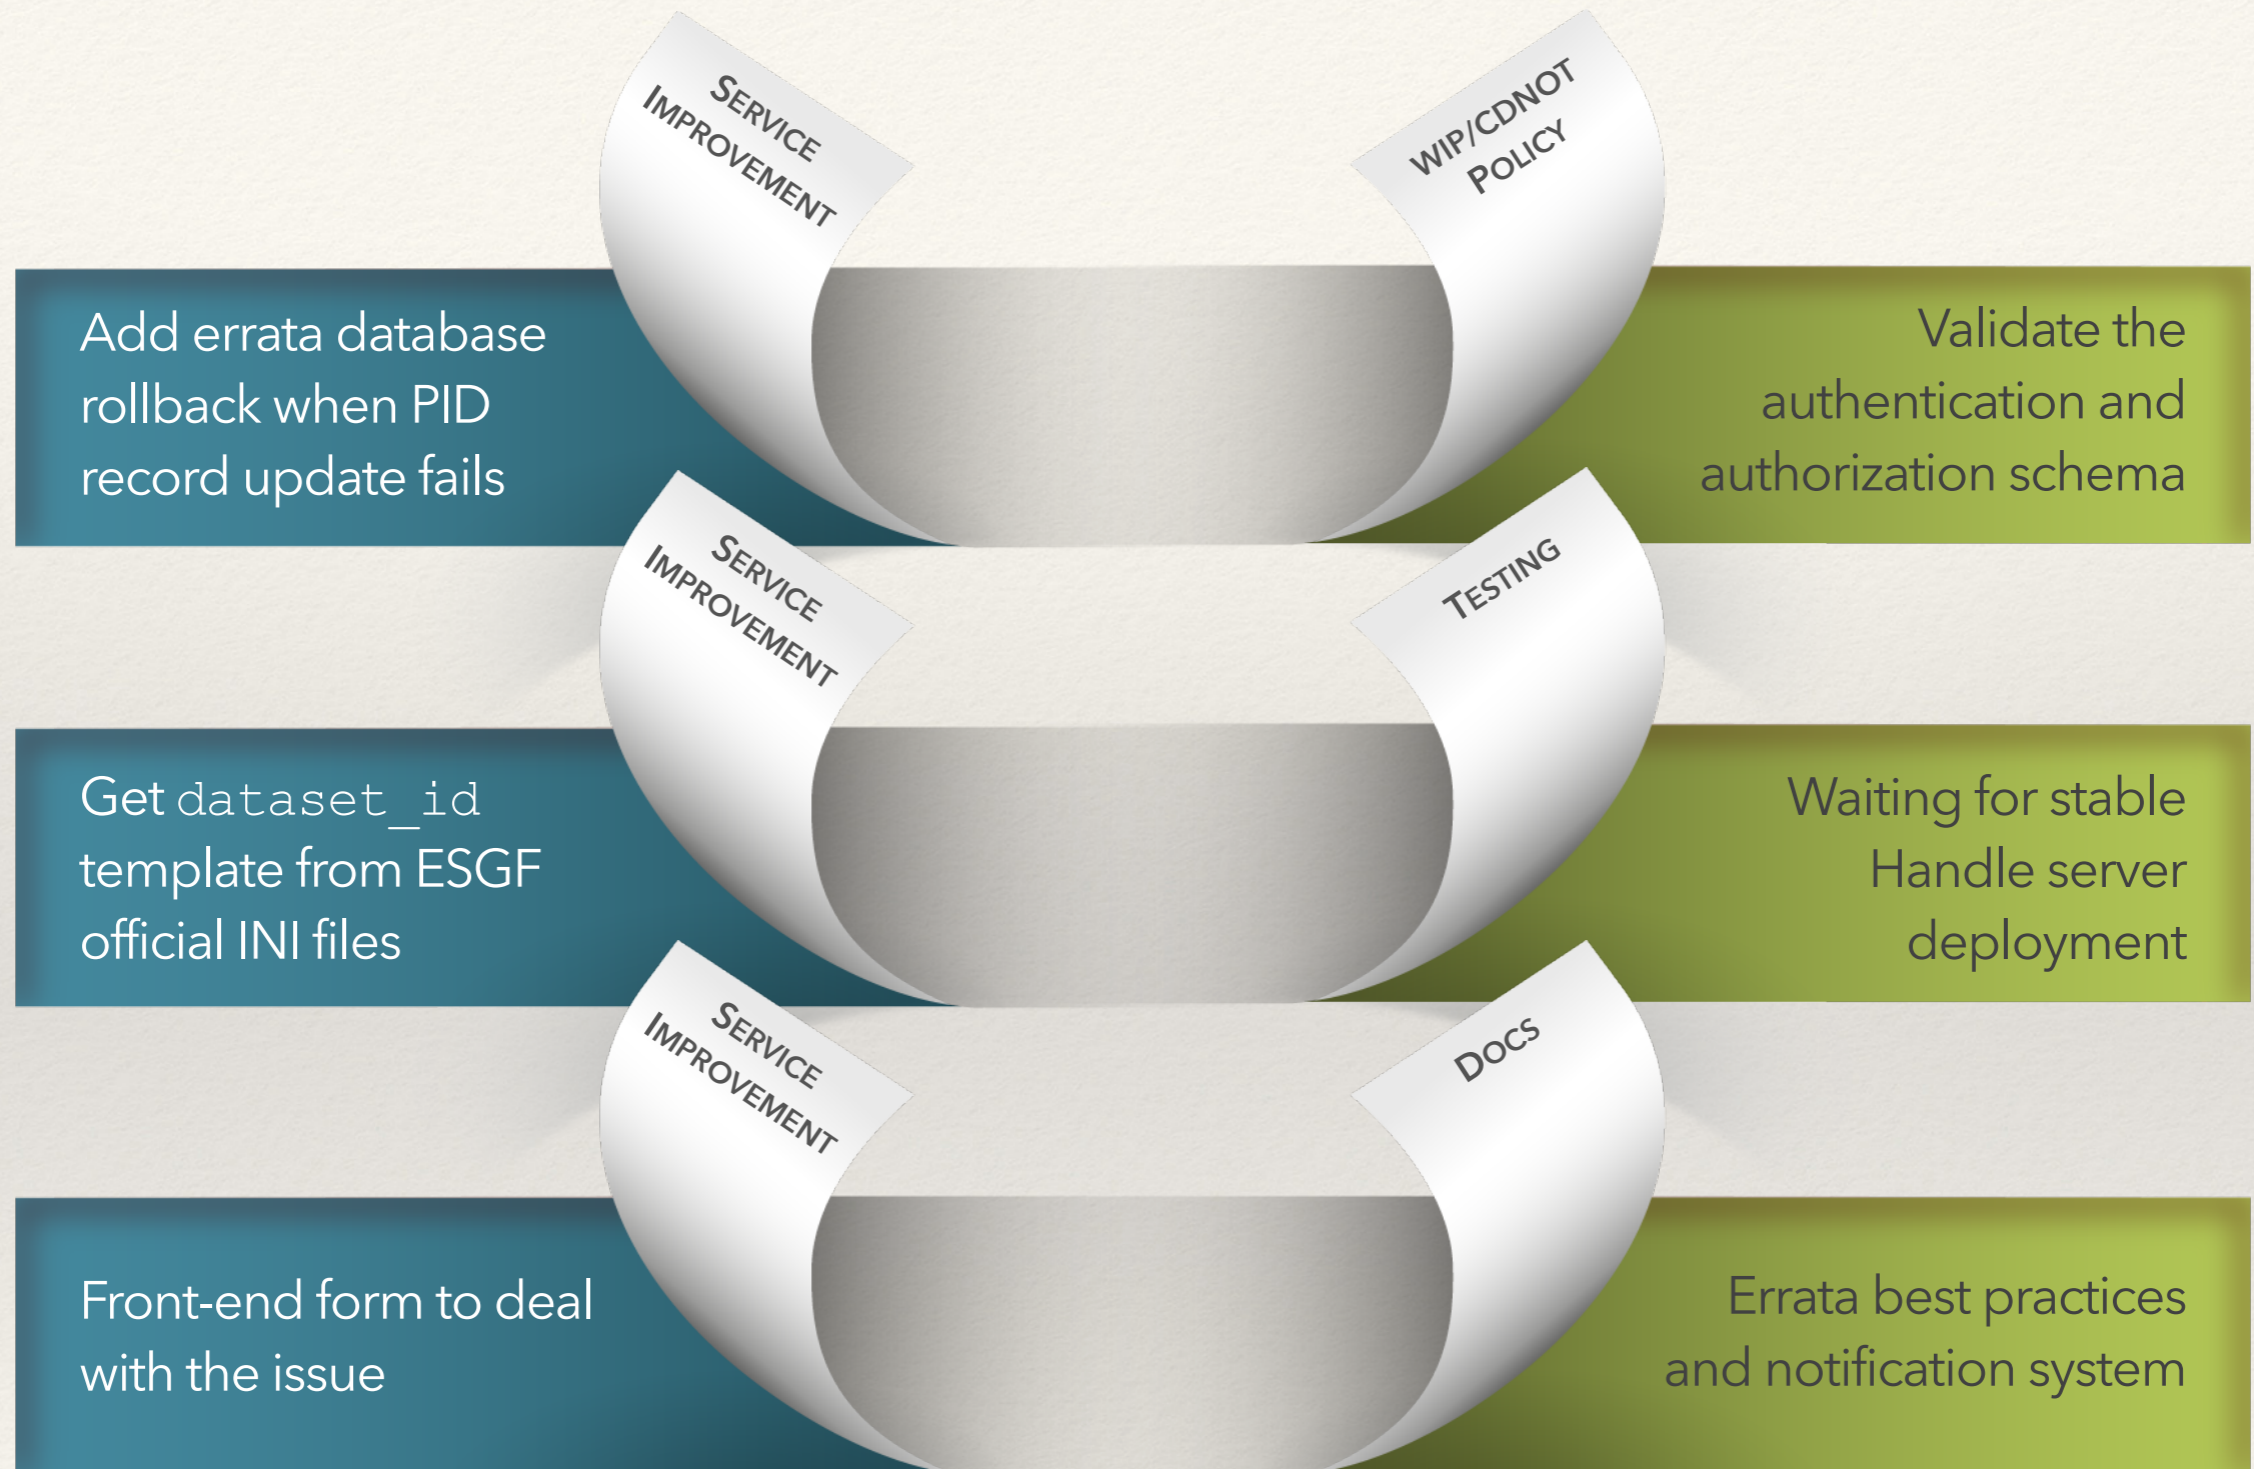

- ✓ Issue validation is mirrored on client and server sides
- ✓ Authentication and authorization are delegated to GitHub OAuth
- ✓ Publisher permissions set at the modeling groups/institute level

Users can query about corrections applied to a dataset/file or some facets

- ✓ Exploit PIDs to support the link between dataset version and issue
- ✓ An algorithm deduces affected files from issues at the dataset level
- ✓ Responsive issue tracking system deployed and branded by ES-DOC to provide timely information about known issues

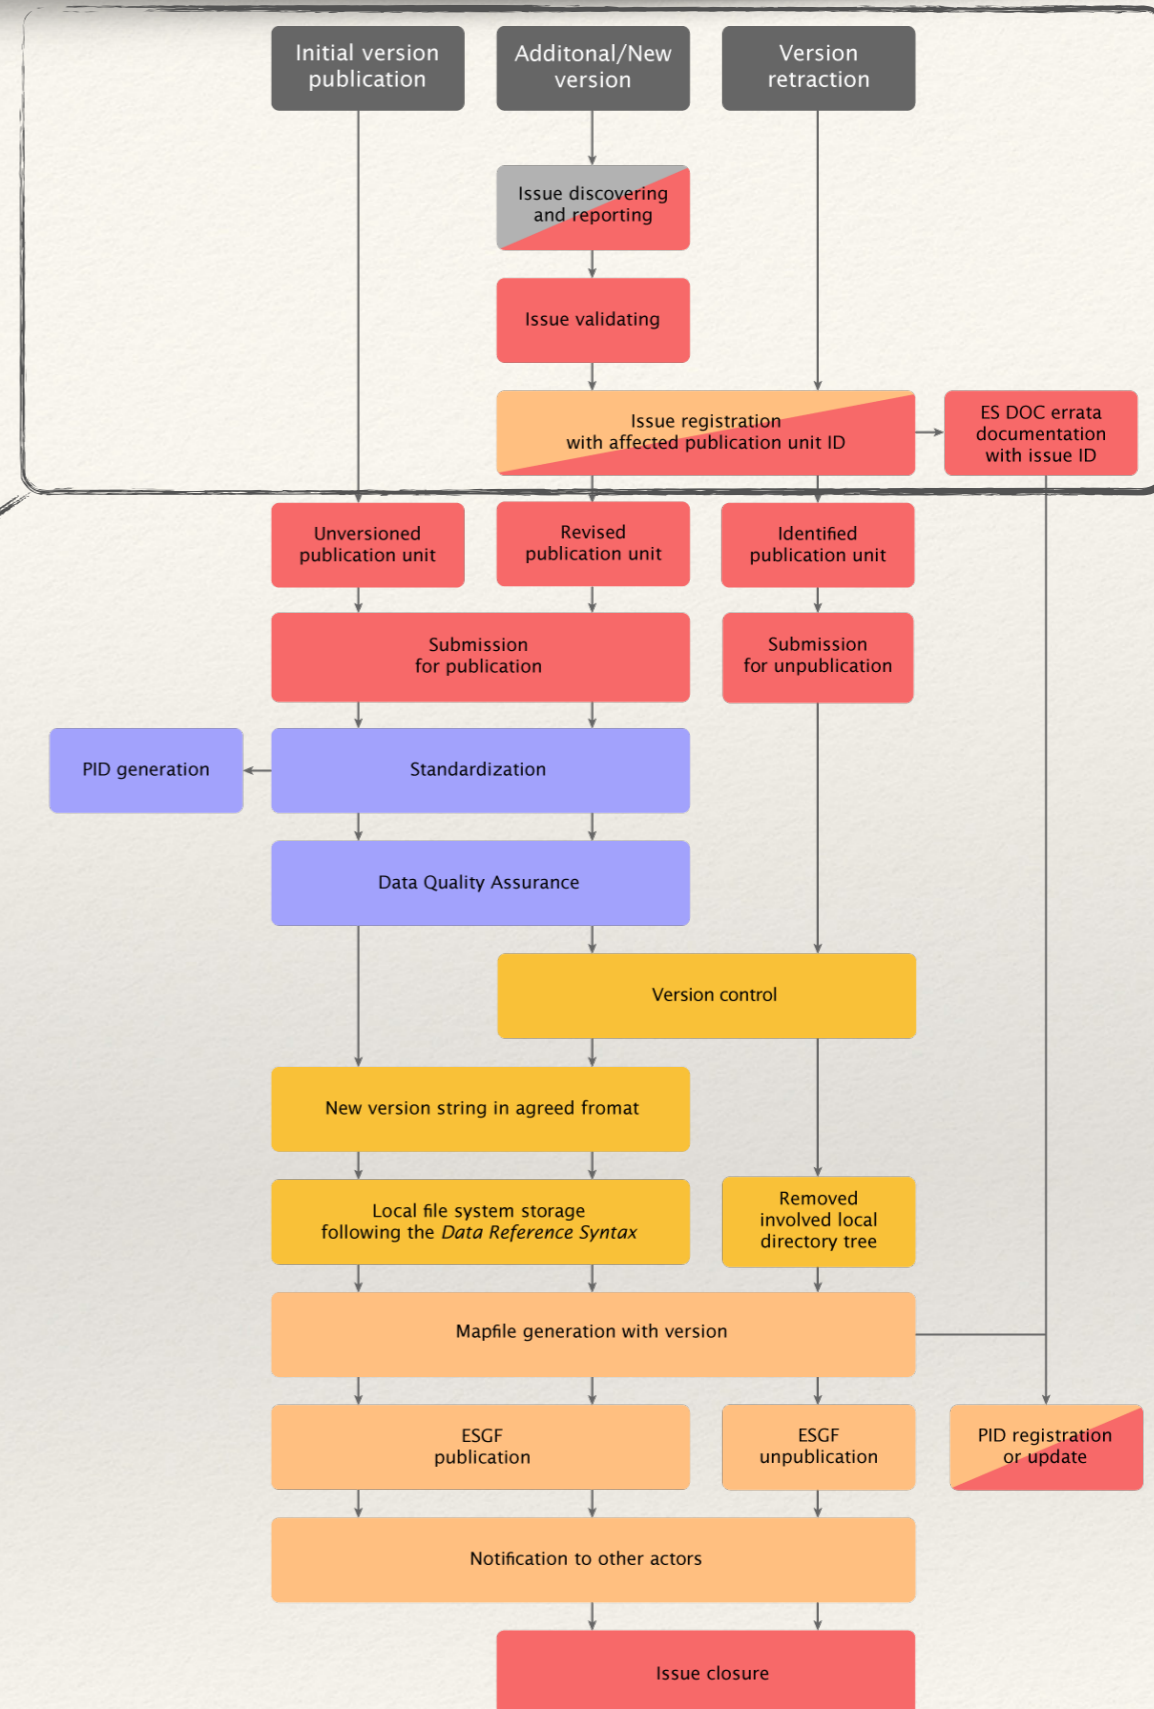

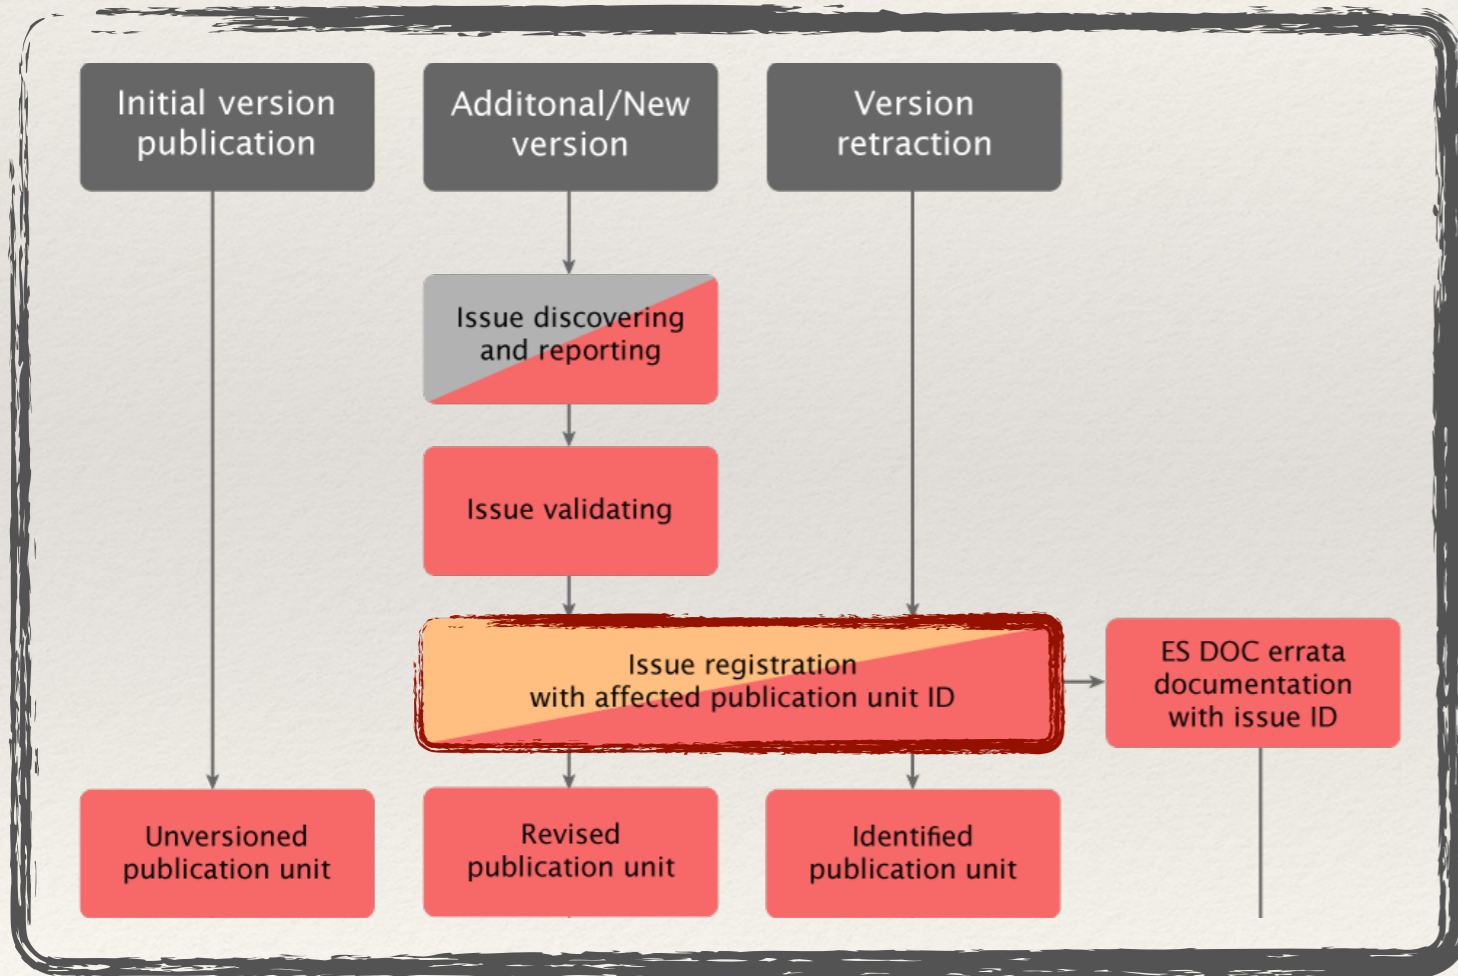

## Progress towards beta release

# Step 1 - When to register my issue?

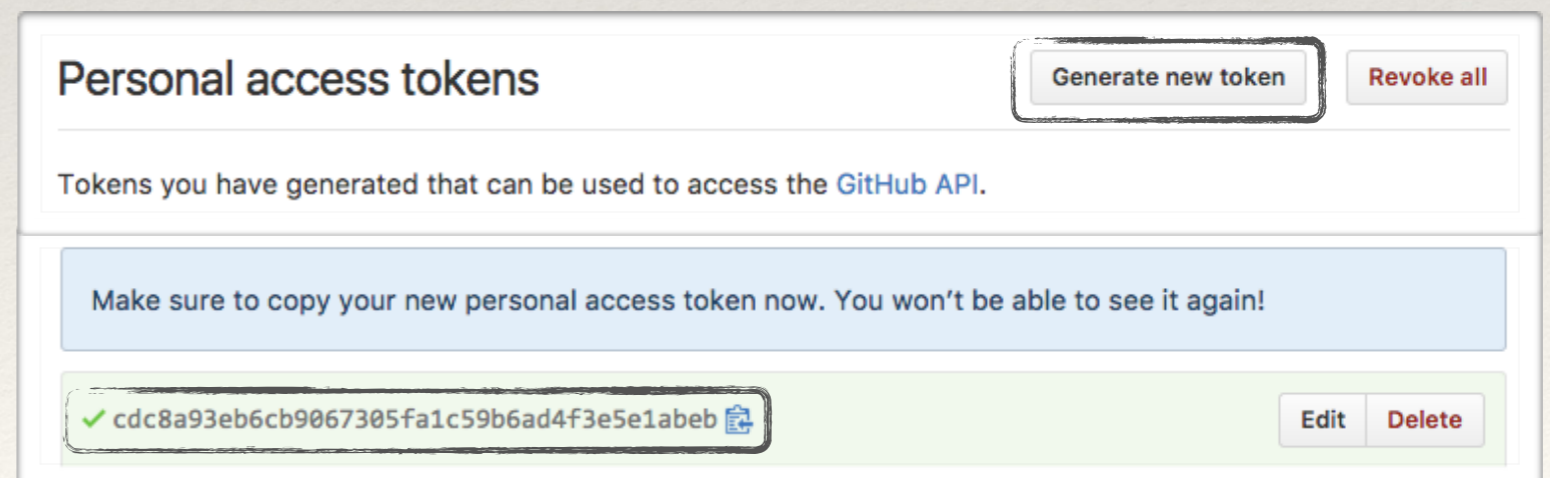

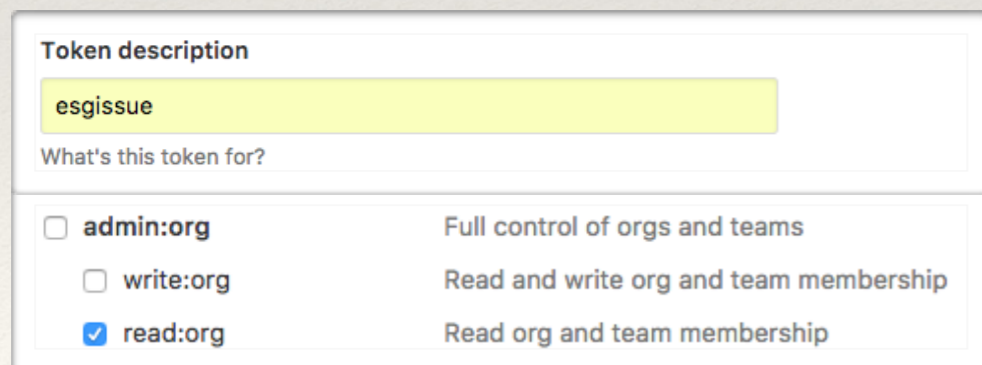

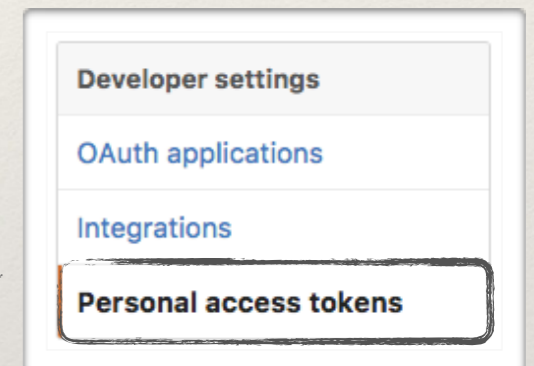

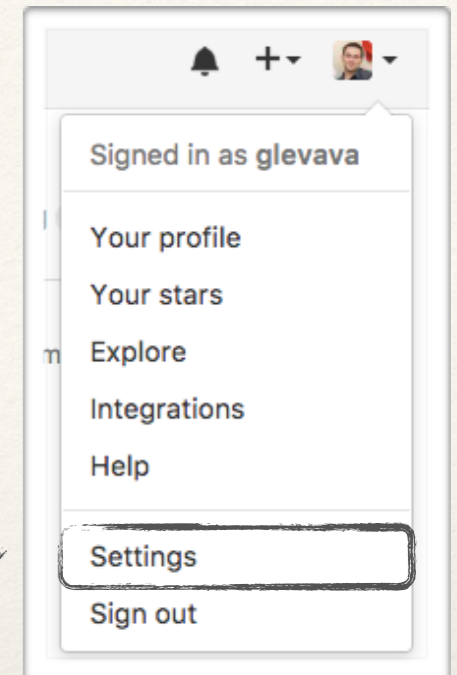

Any kind of error or mistake leads to a version change of a dataset and, conversely, any change of a dataset (values, metadata, etc.) should be justified by an issue.

## Step 2 - How to authenticate with my GitHub account?

- Create a GitHub account
- Generate a personal access token from your account settings  
(see: <https://help.github.com/articles/creating-an-access-token-for-command-line-use/>)
- The ES-DOC errata client only need to read your organization membership (i.e., token scope = **read:org**).
- Ask authorization to ES-DOC errata administrators to be part of:
  - The **es-doc** GitHub organization (may change depending on the WIP),
  - Your **errata-publication-<institute>** team.
- Your GitHub username and personal access token will be required (at least) for the first use of the ES-DOC errata client.

## Step 3 - One issue = two files

The issue manager works with both JSON and TXT files. This allows the data provider in charge of ESGF issues to manage one or several templates gathering the issues locally.

```
# Edit your issue following our JSON template (with only 4 mandatory attributes)
> vi myissue.json
```

```
{
  "title": "My Issue Title",
  "description": "This is a test description, void of meaning.",
  "project": "cmip5",
  "severity": "high",
  "materials": ["http://www.my-errata.org/images/issue.jpg"],
  "url": "http://www.myissue-landing-page.org/"
}
```

```
# Edit the list of affected dataset ids WITH version number
> vi mydsets.txt
```

```
cmip5.output1.IPSL.IPSL-CM5A-MR.historical.mon.land.Lmon.r1i1p1#20111119
cmip5.output1.IPSL.IPSL-CM5A-LR.historical.3hr.atmos.Lmon.r3i2p3#20121212
cmip5.output1.IPSL.IPSL-CM5A-LR.historical.6hr.atmos.Lmon.r2i5p4#20121212
[...]
```

Each issue will be validated against the appropriate JSON schema to ensure template conformance, security and issue quality.

## Step 4 - ES-DOC issue publishing

```
# Issue creation is the first step in the issue life cycle
```

```
> esgissue create --issue myissue.json --dsets mydsets.txt
```

```
Username: glevava
```

```
Token: 16b015c38b9a7129475bcb190f1fa3fca6c022a8
```

```
INFO Credentials were successfully saved.
```

```
INFO Validating issue...
```

```
INFO Validation Result: SUCCESSFUL
```

```
INFO Requesting issue #cd6ebba4-3eda-4e9a-9882-17a370c49419 creation from errata service...
```

```
INFO Updating fields of payload after remote issue creation...
```

```
INFO Issue json schema has been updated, persisting in file...
```

```
INFO Issue file has been created successfully!
```

```
# On success the issue UID, the status, the creation and update dates are appended to the local issue file
```

```
{  
  "uid": "cd6ebba4-3eda-4e9a-9882-17a370c49419",  
  "title": "My Issue Title",  
  "description": "This is a test description, void of meaning.",

## Step 4 - ES-DOC issue publishing

```
# Some issue information can be updated by just editing your local issue file again
```

```
{  
  [...]  
  "description": "This is a new description, but now it's updated.",  
  "status": "onhold",  
  [...]  
}
```

```
> esgissue update --issue myissue.json --dsets mydsets.txt  
INFO Validating issue...  
INFO Validation Result: SUCCESSFUL  
INFO Update issue #cd6ebba4-3eda-4e9a-9882-17a370c49419  
INFO Issue has been updated successfully!
```

```
# On success the update date is changed accordingly into the local issue file
```

### Safeguards requirements:

- The issue id, title, creation and update dates have to be unchanged,
- The issue description cannot be empty,
- The issue severity must be one of "low", "medium", "high" or "critical",
- Optional URLs must be valid and reachable,
- The issue status must be one of "new", "onhold", "wontfix" or "resolved" and cannot be changed back to "new",
- The submitted dataset ids must be properly formatted.

<b>ESG-F Errata Identifier</b>	cd6ebba4-3eda-4e9a-9882-17a370c49419

## Step 4 - ES-DOC issue publishing

```
# At any time your issue files can be retrieved from the server
> esgissue retrieve --id cd6ebba4-3eda-4e9a-9882-17a370c49419
INFO processing id cd6ebba4-3eda-4e9a-9882-17a370c49419
INFO Issue has been downloaded.
> ls ./issues
issue_cd6ebba4-3eda-4e9a-9882-17a370c49419.json
> ls ./dsets
dset_cd6ebba4-3eda-4e9a-9882-17a370c49419.txt
```

- Output folders for local issue files and datasets list can be respectively set with "--issue" and "--dsets" flags.
- One or several issue id(s) can be retrieved.
- If no issue id, default is to retrieve all errata issues of your modeling group/institute.

## Step 5 - ES-DOC PID request

```
# Edit the list of PIDs you want to submit
> vi pid-test.txt
```

```
